

The College of Dental Hygienists of Manitoba's Practice Guidelines on the Use of VELscope®

While the use of adjunctive tools such as direct fluorescence visualization (VELscope®) or toluidine blue is within the DH Scope of Practice, these tools remain complementary to a comprehensive health history review and the fundamental visual and tactile means of intra-oral and extra-oral examination. In order to use these tools, dental hygienists must acquire adequate training to be competent in their application.
